Response to - What are the symptoms of hypertension?

Hypertension often presents asymptotically. Severe cases may manifest with headaches, dizziness, blurred vision, chest pain, and shortness of breath. BP readings $>140/90$ mmHg indicate hypertension requiring medical evaluation.

BioMedLM

High blood pressure symptoms include headache, fatigue, chest discomfort. Many patients have no initial symptoms. Severe cases show vision problems, breathing difficulty. Regular monitoring important.

DialoGPT-S

Hi! Hypertension can be tricky - many people don't feel symptoms at first. Some notice headaches or dizziness. It's called the "silent killer"! Regular check-ups are important. Talk to your doctor about monitoring.
